PROJECTS — LIVE

EDORTECH

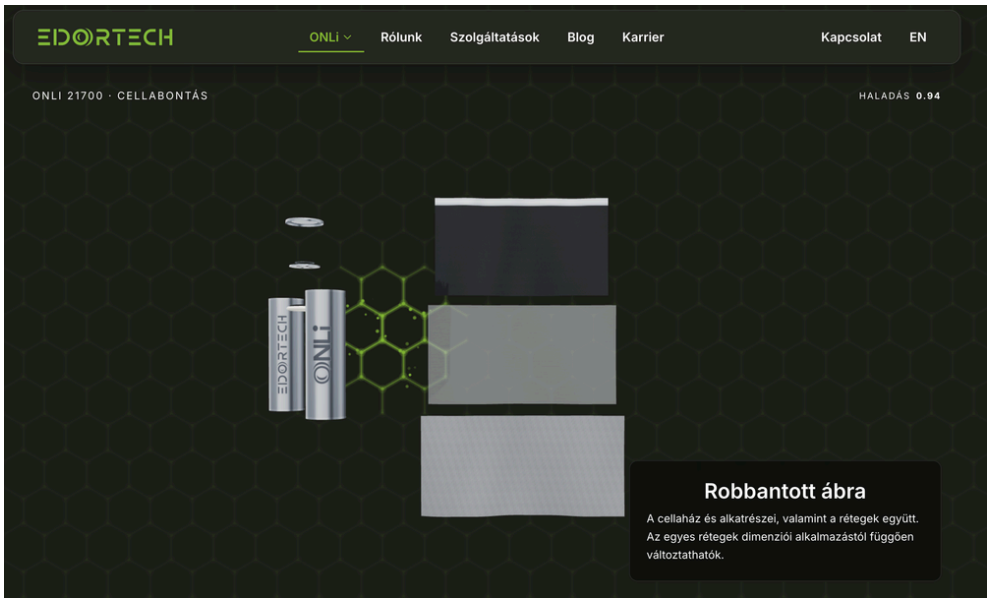

An innovative deep-tech company focused on high-energy systems and the development of next-generation battery technologies.

This website is close to my heart, as it was my first major project, so I did my very best to make it a success.

The goal was simple: a modern, clean, fast website that is multilingual.
I had to take SEO and GEO optimizations into account so that search engines would rank the site highly and artificial intelligence could reference it in response to questions asked online.

The frameworks I chose were Astro, Three.js, and Tailwind. The choice was straightforward: performance was the primary consideration, along with the ability to use 3D models, which Three.js made possible.

I created the design based on the company's primary colors, incorporating a glass effect.
